

## 23. To Insert a Video Clip into an Article

Inserting a video clip is as easy as inserting an image into an article. In such case, a preview image will appear at the place where you insert the video. It is ready for the visitor to start playing.

### History of radio

Author : [From Wikipedia, the free encyclopedia](#)

The early history of radio is the history of technology that produced radio instruments that use radio waves. Within the timeline of radio, many people contributed theory and inventions in what became radio. Radio development began as "wireless telegraphy". Later radio history increasingly involves matters of programming and content.

Various scientists proposed that electricity and magnetism, both capable of causing attraction and repulsion of objects, were linked. In 1802 Gian Domenico Romagnosi suggested the relationship between electric current and magnetism, but his reports went unnoticed. In 1820 Hans Christian Ørsted performed a widely known experiment on man-made electric current and magnetism. He demonstrated that a wire carrying a current could deflect a magnetized compass needle. Ørsted's experiments discovered the relationship between electricity and magnetism in a very simple experiment. Ørsted's work influenced André-Marie Ampère to produce a theory of electromagnetism. During its early development and long after wide use of the technology, disputes persisted as to who could claim sole credit for this obvious boon to mankind. Closely related, radio was developed along with two other key inventions, the telegraph and the telephone.

Nikola Tesla developed means to reliably produce radio frequencies, publicly demonstrated the principles of radio, and transmitted long distant signals.

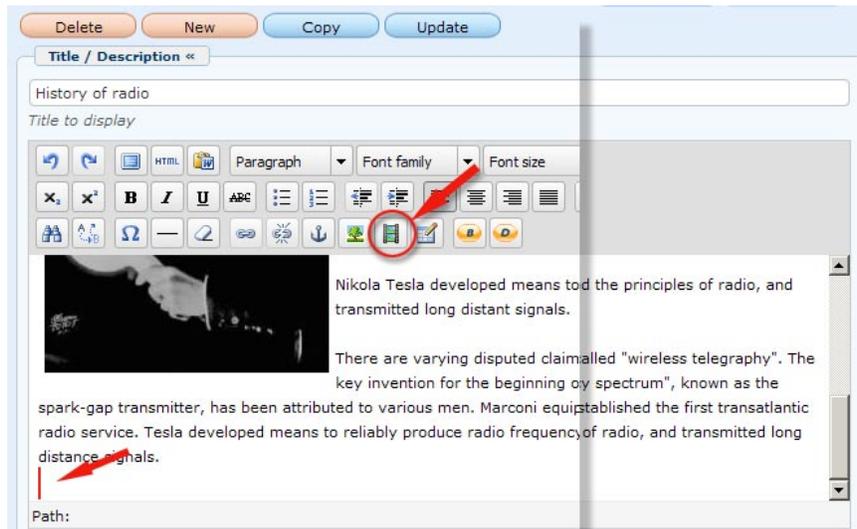

There are varying disputed claims about who invented radio, which in the beginning was called "wireless telegraphy". The key invention for the beginning of "wireless transmission of data using the entire frequency spectrum", known as the spark-gap transmitter, has been attributed to various men. Marconi equipped ships with lifesaving wireless communications and established the first transatlantic radio service. Tesla developed means to reliably produce radio frequency electrical currents, publicly demonstrated the principles of radio, and transmitted long distance signals.

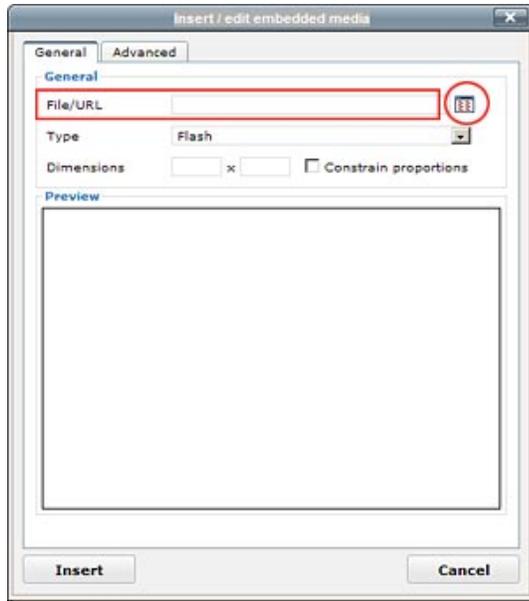

In this example, you will insert a video clip into the article "History of Radio" in the English site. The video clip is "The birth of the radio age-1920s", which is a flash movie (FLV format).

**Here's how to do it:**

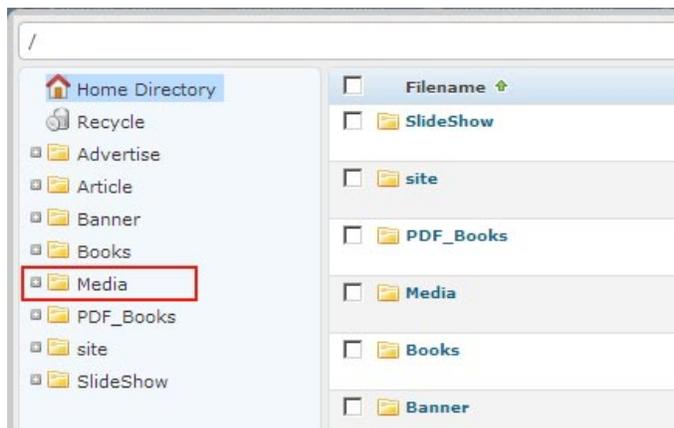

- A.** Login the **Control Panel** as usual.
- B.** Go to **Content Manager** in the Top Menu and select “**Articles**” in the drop down list.
- C.** **Select the language site.** If the box near the upper left corner is not showing “English Site”, click the box and select “English Site”.
- D.** You will see a list of existing article in the English site.
- E.** Find the article “History of Radio”. Click on the title to open the record.
- F.** Inside the “Description” box, find the place where you want to insert the video clip. In this example, we will insert the video at the end of the article.

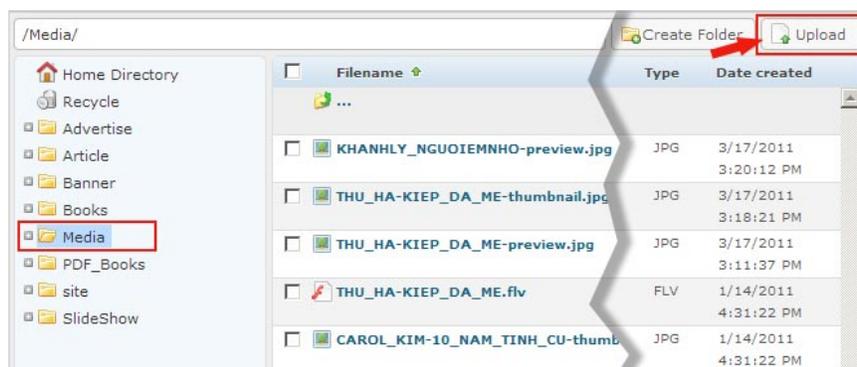

- G.** Click on an empty line below the article. If there is no empty line, click at the last character of the article, then hit the “Enter” key to add an empty line.
- H.** Click the icon for “Insert/Edit Embedded Media” among the editor’s tools. It is the icon with a film strip. The “Insert Media” window will appear.

- I. Click the icon at the end of the “File/URL” box. You will see the files and folders in the web server.

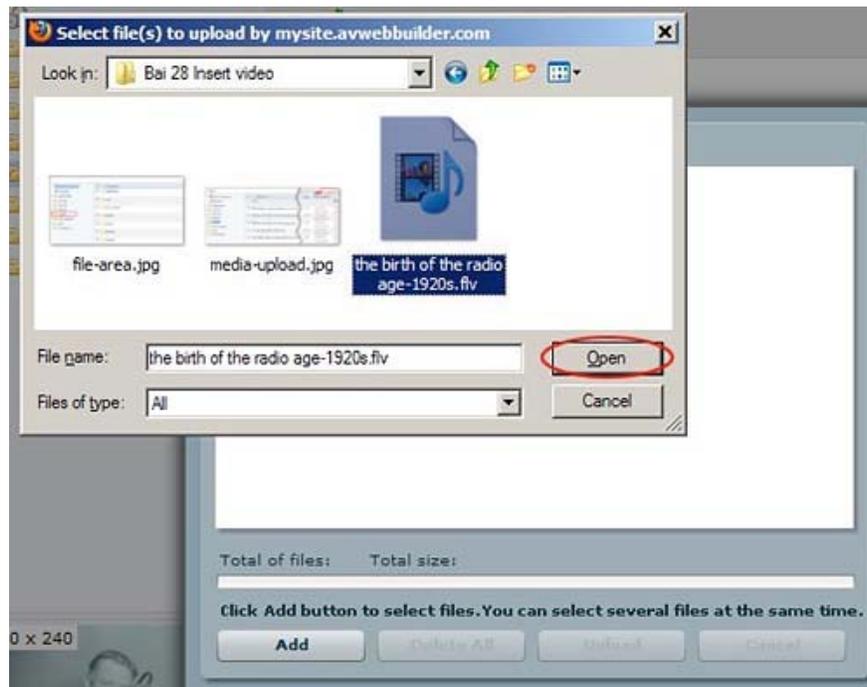

- J. Since you are posting a video clip, you should upload it into the “Media” folder. Click on the folder named “Media”. You will see the existing video files on the right of this screen.

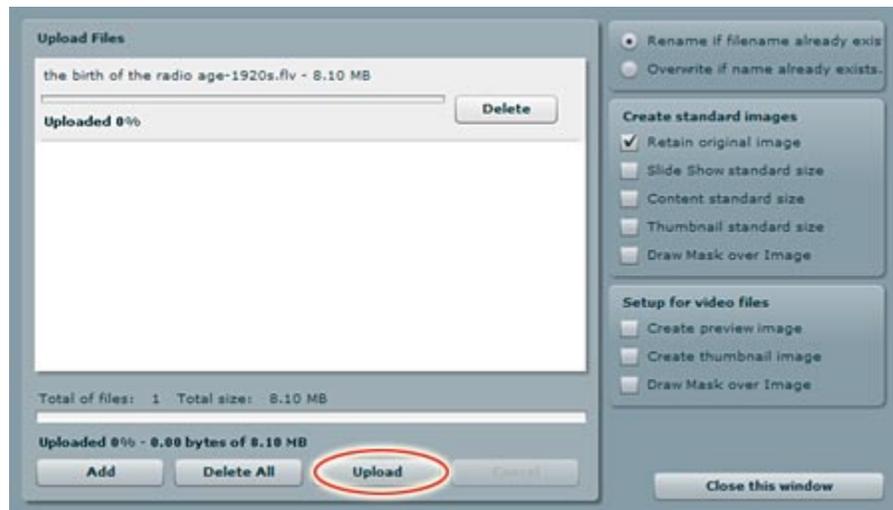

- K.** Click the “Upload” button at the upper right corner. The “Upload” screen will appear.

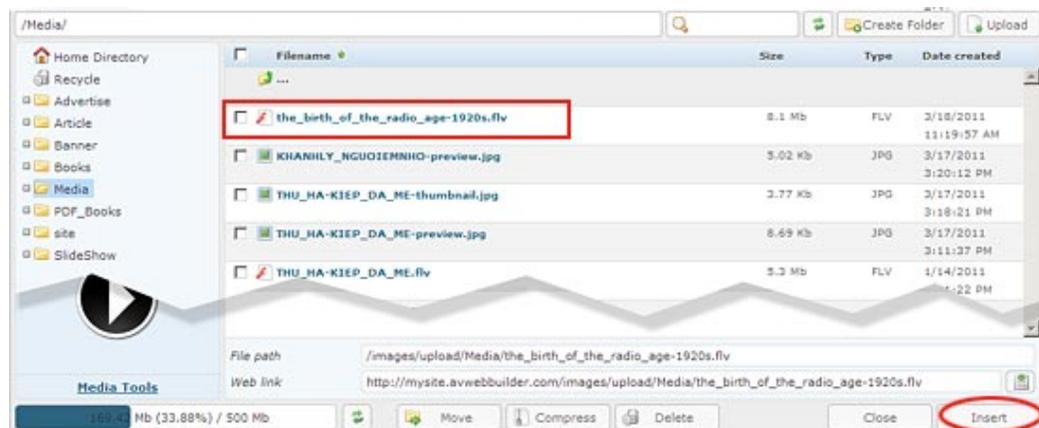

- L.** Click the “Add” button. You will see the files in your computer.

- M.** Find the video file you want to upload.
- N.** Click on the filename. Then, click the “Open” button near the lower right corner.
- O.** You will be back to the “Upload” screen. This time, the video file will appear near the top of this screen.

- P. Click the “Upload” button.
- Q. When the file transfer is completed, the message “All files have been uploaded” will appear. Click “OK”.
- R. Click the “Close this window” button.
- S. You will be asked to confirm. Click “Yes”. You will be back to the folder “Media” of the server and the file you’ve just uploaded will appear in the list.
- T. Click on the filename. Then, click the “Insert” button at the lower right corner.

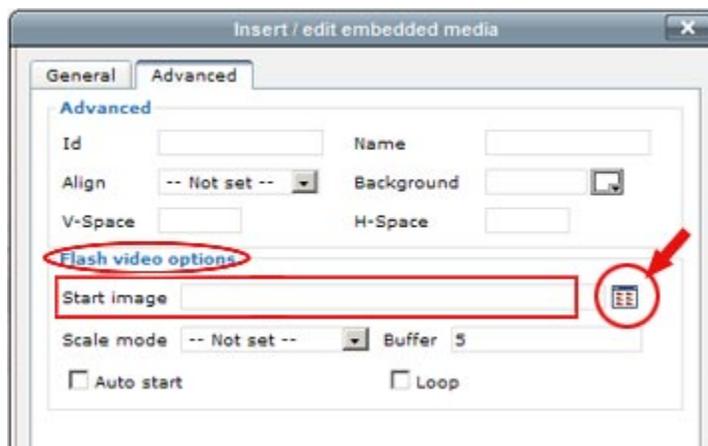

- U. You are back to the “Insert Media” screen. The “File/URL” box is now filled with the path to the video file.
- V. Do not concern about the “Type” box. This box only shows the video format of this file.

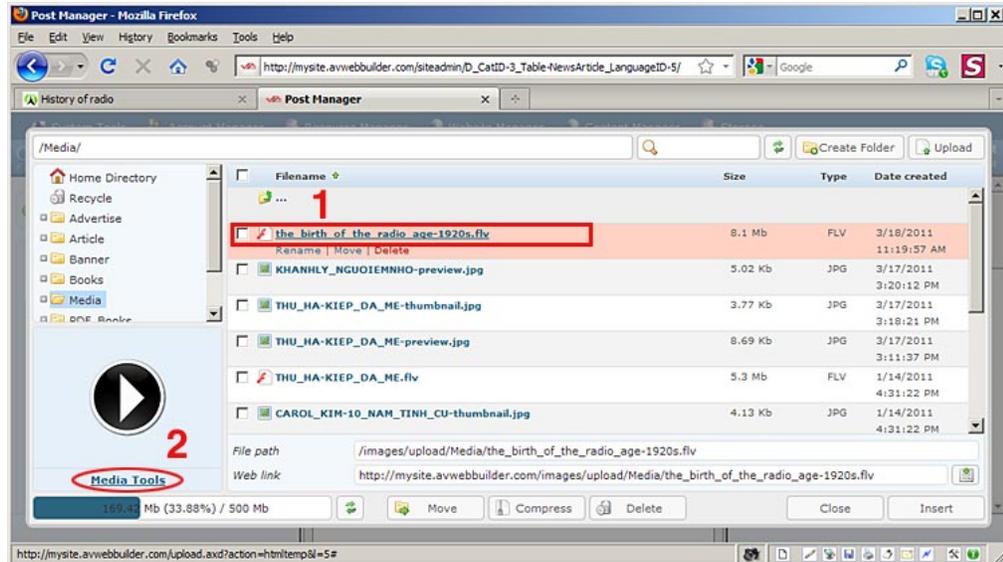

**W.** If you've just uploaded a flash video, you will need to display a preview image of the video. Here's how to do it.

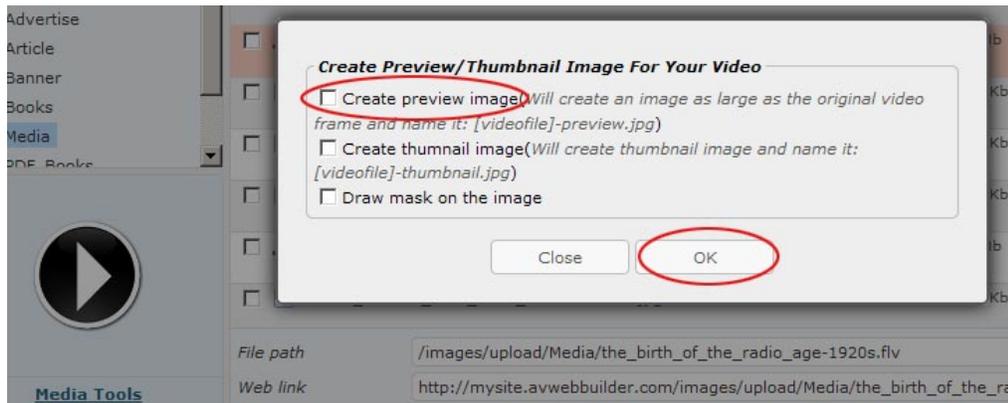

- Click the “**Advanced**” tab. The screen will look like this.

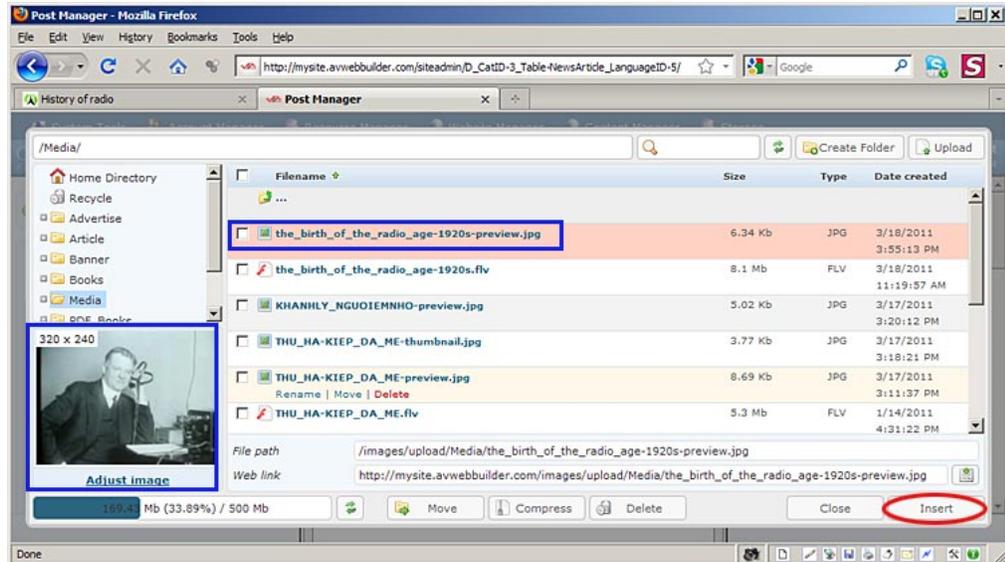

- Find the “Start Image” box in the “Flash video options”. Click the icon at the end of the box.

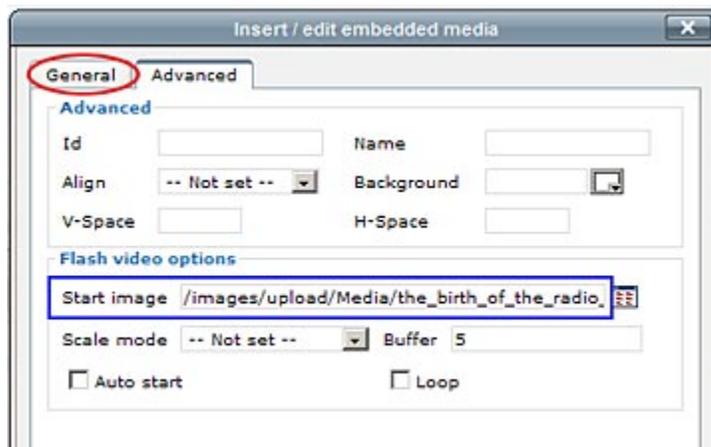

- Find the flash video file you’ve just uploaded. Click on it.
- Look at the lower left corner, you will find a button named “Media Tools”. Click on “Media Tools”. A screen like this will appear.

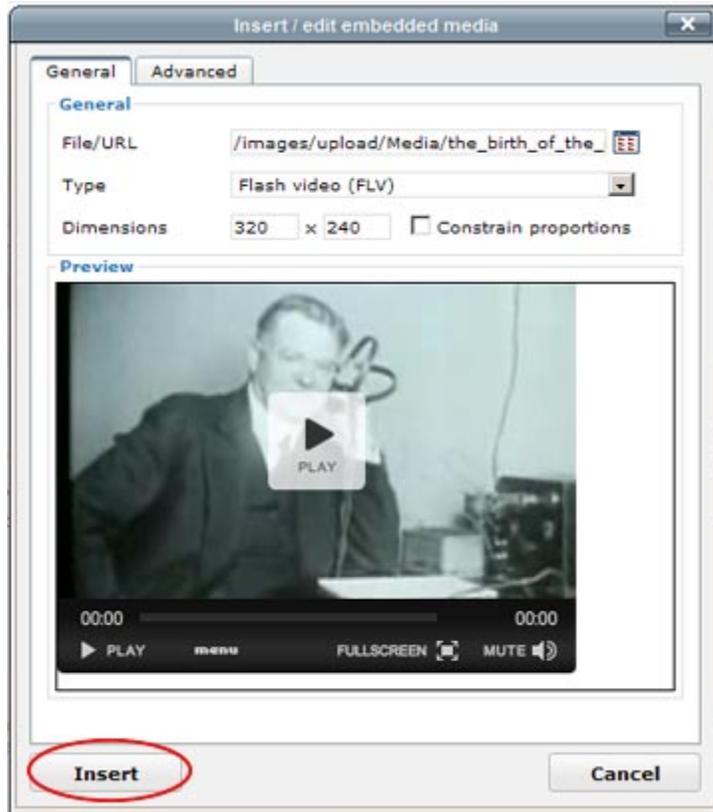

- Click the box on the top line.
- Click the “OK” button. You will be back to the list of files in the “Media” folder. This time, a new image file (JPG format) has been created. The filename is similar to video file with an extra part “-preview”. This file is being highlighted with a red background and the image of this file is shown at the lower left corner.

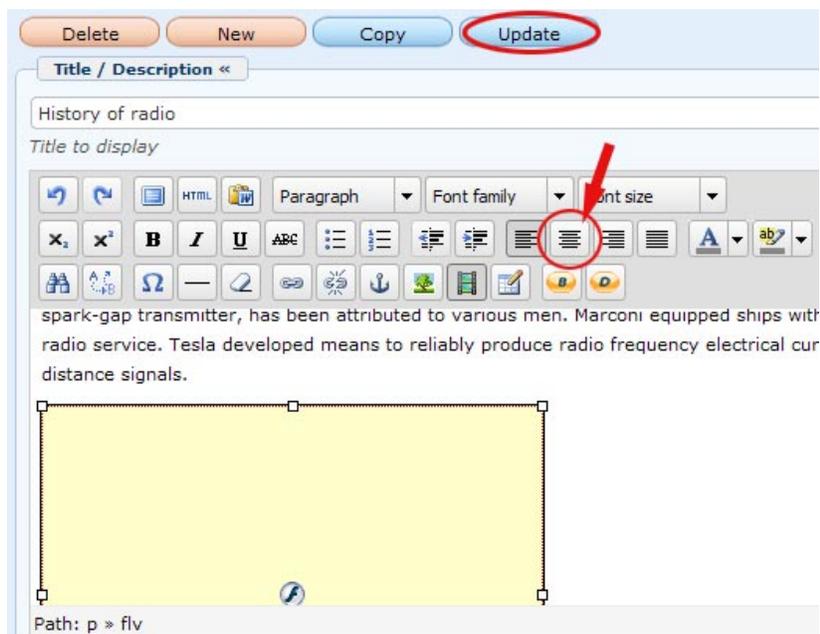

- Click the **“Insert”** button at the lower right corner. You will be back to the **“Insert Media”** screen and the path to the file has been filled in the **“Start Image”** box.

- Click the **“General”** tab to see the **“Insert Media”** first screen. The **“Preview”** box is now showing the preview image you’ve just created.

- Click the “**Insert**” button. You will be back to the article record. A light yellow frame will now appear at the position where you’ve inserted the video file.

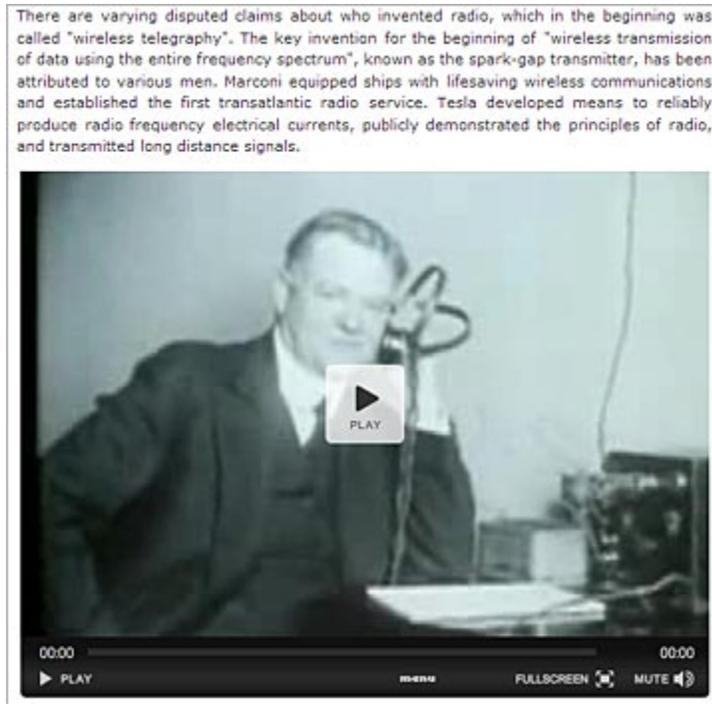

- Let’s move the video to the center of the column.

- Click the light yellow frame to select it. There will be 8 small squares around this frame.
- Click the icon for “align center” in the tool box. The light yellow frame will be moved toward the center of the text.
- Finally, click the “Update” button.
- Go to your website to check if the video has been added to the end of this article. You may need to click the “Refresh” button to update this web page. Your web page will look similar to this.

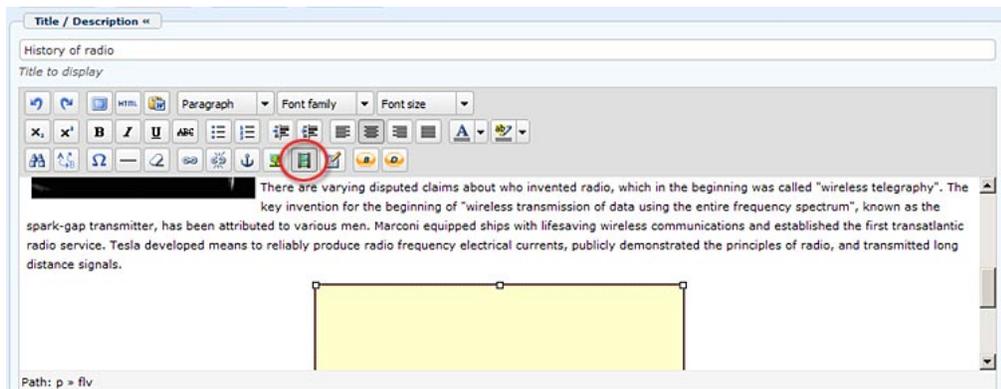

- X.** Your video can be viewed with a larger size than the original. Let’s make the video screen as large as the column width, which is 524 pixels, similar to this.

Y. Here's how to do it (suppose your video is a flash video).

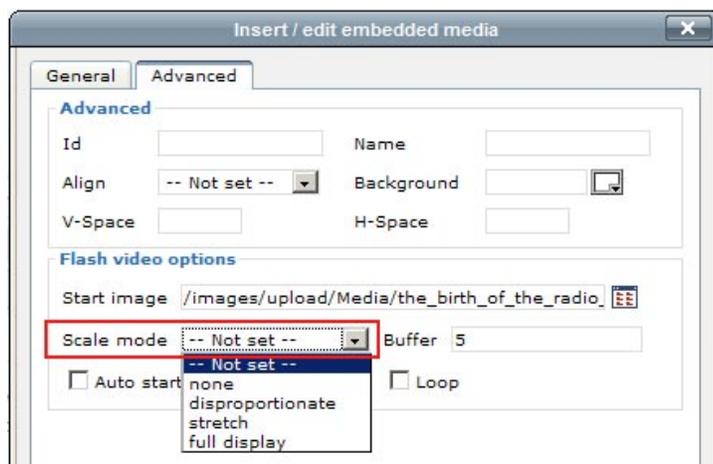

- You need to be back to the Control Panel and open the article record that you've just inserted the video clip.

- Click the light yellow frame to select this video. Eight small squares will appear around this frame.
- Click the “Insert Media” icon in the tool box. The “Insert Media” screen will appear.

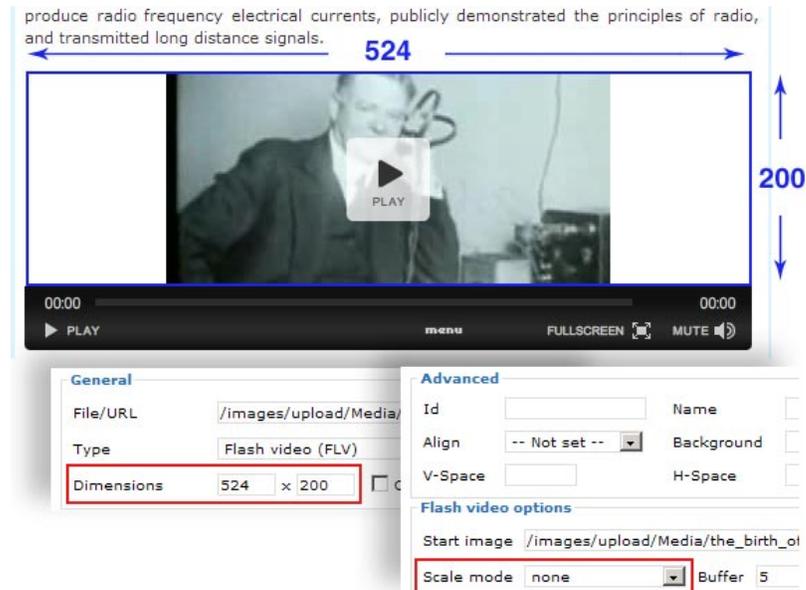

- Change the data in the “Dimensions” boxes to **524 x 400**. You still need to do some more steps.
- Do not concern about the “Constrain proportion” box.
- Click the “**Advanced**” tab. The screen will look like this.

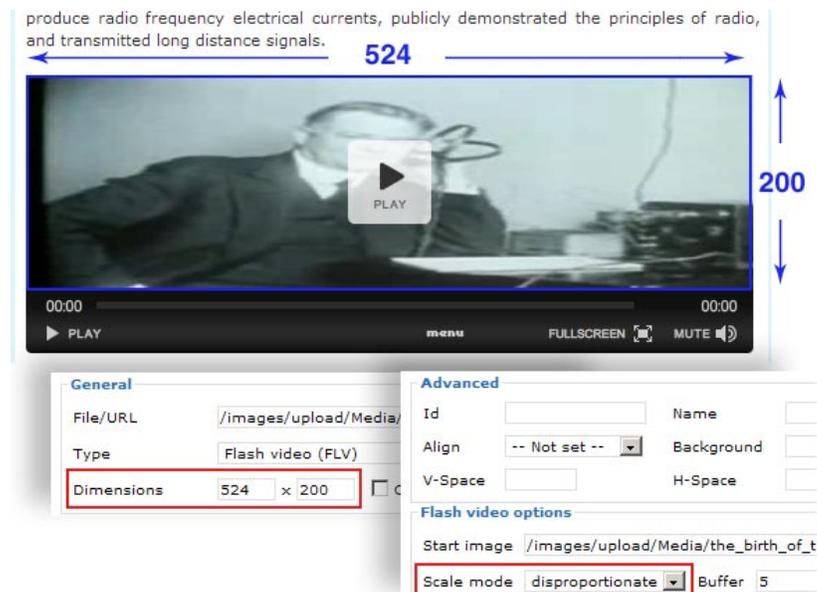

- Click the “Scale mode” box and select “**full display**”.

**NOTES:** Following are the results of different scale modes. We use the dimensions “524 x 200” to demonstrate these results more clearly. In reality, you should choose dimensions proportional to the original video size.

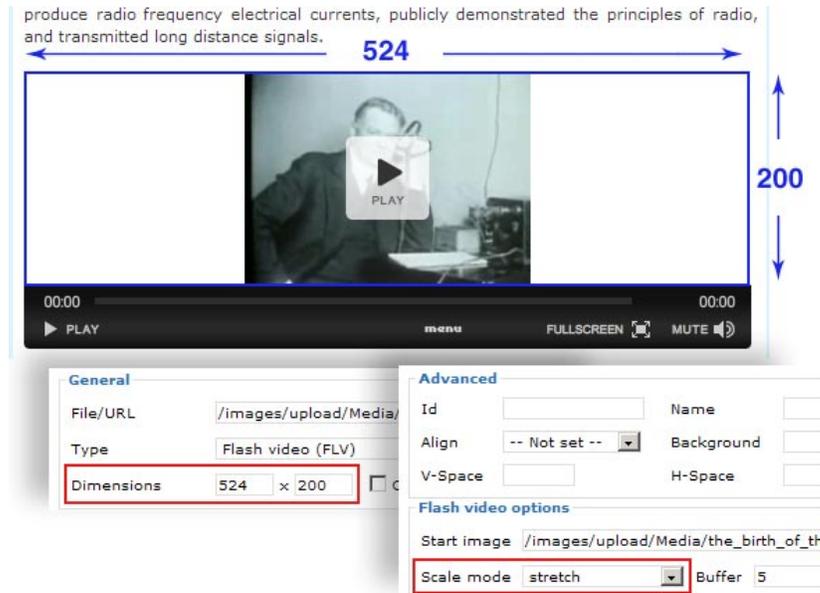

- **None.** The video will not be resized. If the specified dimension is larger than the original video, the extra space is filled with white. If the specified dimension is smaller than the original video, it will be cropped.

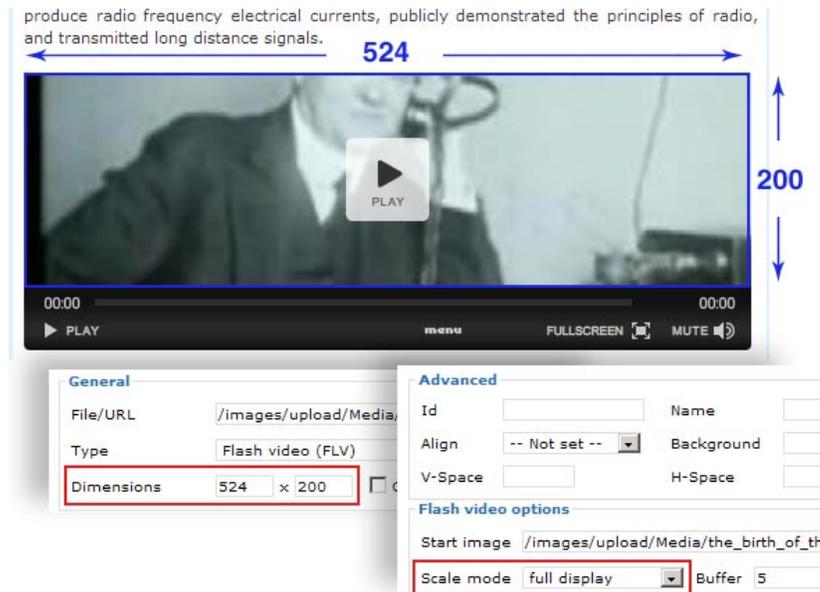

- **Disproportionate.** The video will be enlarged (or reduced) on both sides to fit the specified dimensions. The result is a distorted video.

- **Stretch.** The video is enlarged (or reduced) until one side is equal the specified dimension and the other side is smaller than the specified dimension. The unfit side is filled with white.

- **Full display.** The video is enlarged (or reduced) on both sides until one side is equal the specified dimension and the other side will be larger than the specified dimension. The larger side will be cropped to the specified dimension.

- Do not concern about the other boxes in the “Advanced” tab.

- Click the “Insert” button to finish. The “Insert Media” screen will be closed.
- Click the “Update” button of the article record to save the changes.
- Go to your website to check if the video has been enlarged to fit the whole column. You must refresh the web page to see the changes you’ve just made.

**You have finished inserting a video clip into an article.**
